

# NAZAR | Content Notes

The project explores themes of war and surveillance which may be triggering for individuals with personal experiences related to these subjects. We encourage participants to consider these themes before engaging with the experience.

## **Health & Safety Considerations:**

- This experience uses Virtual Reality (VR), which may cause dizziness, nausea, disorientation, or headaches in some participants. If you are prone to motion sickness or have a history of seizures or epilepsy, please participate with caution.
- The experience involves physical touch between the performer and the participant. Touch involves interaction with shoulders, forehead, arms and legs. If you prefer not to be touched, this aspect can be removed.
- A portable diffuser with organic essential oils will be used to create an immersive olfactory environment. Please inform us of any sensitivities or allergies beforehand.
- At the end of the experience, participants will be offered dates to taste as part of the performance. If you have any allergies or dietary restrictions, or if you prefer not to eat, you are welcome to opt out of tasting.

## **Accessibility & Customization:**

- The experience involves walking and navigating through the space, but a seated version of the experience is available upon request.
- Participants can choose between an English or Arabic version of the experience.
